A "Training Needs Assessment" or "Training Needs Analysis" is the method of determining if a training need exists and if so, what training is required to fill the gap.

A training need exists when there is a gap between the required performance of a person in a given work competency and what is known, known of the performance of that person.

1. The results of training needs analysis will highlight the subject matter needed to be covered during the training course.
2. The knowledge and skills gained during the training will increase abilities and allow participants to perform their jobs at an acceptable level.

The needs assessment can be quite simple and obvious. For example, when a new Multi-Passenger Cardiac Monitor is purchased, it is assumed that no one has the knowledge on how to operate it - and the training need is noted. It is not as simple as it sounds. For example, if a person is asked to perform a task, they may not be as proficient as the training would have them be. The training is required for those functions.

By conducting training needs analysis, we can target the groups that need to be trained, as well as, improve on exactly what training is required.

The purpose of conducting a needs assessment is to prevent a quick fix approach to business problems. A TNA done correctly will ensure that the results address the real issues and effectively focuses on the appropriate resources, time and effort toward targeted solutions.

- The reasons for doing training needs assessment:
- To determine whether training is needed.
 - To determine the scope of the performance.
 - To determine content and scope of training.
 - To determine desired training outcomes.
 - To provide a basis for measurement.
 - To gain management support (by focusing on business objectives).

The Needs Assessment Process

The process can be as detailed as needed. Factors to consider when considering the level of detail are time, money, number of people involved, effectiveness of skills, anticipated return on investment (ROI), resources available, etc.
